

AAYAN KARASU

Full-Stack Developer | Mobile Apps | Server Infra | AI Automation

Email: aayankarasu@gmail.com Website: aayankarasu.fun GitHub: github.com/AustinKarasu

Hands-on developer building websites, mobile apps, Discord bots, Minecraft/game-server systems, and Linux/VPS deployments. Comfortable debugging real issues, learning new stacks fast, and using AI tools to improve planning, coding, testing, and documentation.

TECHNICAL SUMMARY

Developer and server engineer able to move between code, servers, automation, and design. Builds front-end/back-end websites, mobile apps, Discord bots, and Minecraft/game-server systems, with hands-on experience managing Linux/VPS environments.

SELECTED PROJECT WORK

ZyroNetwork - Minecraft / Game Server Platform

- Worked on Minecraft Bedrock server systems including server setup, PMMP plugin logic, lobby/core features, rules, Discord integration, and deployment planning.
- Managed VPS/Linux environments, Pterodactyl-style hosting workflows, proxy/server configuration, plugin debugging, and performance-focused server settings.
- Built server-owner style assets such as Discord setups, rule systems, banners/logos, and community-facing website content.

Web and Mobile Software

- Can build frontend and backend websites with responsive pages, forms, dashboards, APIs, database-backed logic, and deployment-ready structure.
- Builds Android and iOS apps with a focus on practical UI, clear user flow, and fast iteration.
- Portfolio website: aayankarasu.fun.

Discord Bots and Automation

- Developed and configured Discord bot features for communities, game servers, moderation workflows, webhooks, support systems, and server-status automation.
- Comfortable connecting bots with APIs, panels, websites, and game-server workflows where needed.

AI-Assisted Engineering Workflow

- Uses Claude, Codex, MCP-based tools, prompt engineering, and multi-agent workflows to plan features, debug errors, review code, write documentation, and speed up delivery.
- Adaptable with new technologies and comfortable learning unfamiliar stacks through documentation, testing, and AI-assisted research.

EDUCATION

Diploma - Technical Stream

- Practical focus on software development, Linux/server administration, cybersecurity practice, and real project building.

TARGET ROLES

Junior Full-Stack Developer, Mobile App Developer, Backend Developer, DevOps/Server Support, Game Server Developer, Discord Bot Developer, AI Automation Assistant.

CORE SKILLS

Software

- Frontend websites
- Backend systems
- REST APIs
- Android apps
- iOS apps
- Discord bots

Server / Hosting

- Linux
- VPS management
- Game hosting
- Pterodactyl
- Minecraft Bedrock
- PMMP
- Dragonfly

AI Tools

- Prompt engineering
- Claude
- Codex
- MCP workflows
- AI agents
- Code review

Security

- Kali Linux
- Ethical hacking labs
- Web security basics
- Recon basics
- Authorized testing

Creative

- Video editing
- Graphic design
- Brand assets
- Banners/logos
- Social media visuals

TOOLS / STACK

- HTML
- CSS
- JavaScript
- Node.js
- PHP / PMMP
- Python
- Go
- SQL
- Git
- Linux CLI
- Kali Linux
- VPS
- Cloudflare
- Nginx
- Pterodactyl

WORK STYLE

- Learns fast and adapts to new tools
- Debugs issues step by step
- Can work across code, servers, and design
- Focuses on working output, not only theory
- Comfortable using AI to improve speed and quality
